

# CLOUD COMPUTING

## Leveraging the power & flexibility of cloud computing for your enterprise

Every business conversation today revolves around SMAC – Social, Mobility, Cloud and Analytics.

The cloud is empowering enterprises to transform their businesses – by accelerating digital innovation, thereby enabling agile business platforms and shortening time-to-market.

Cloud is the cornerstone of a future-ready enterprise and Powermatla ICT aids assessment of business goals and objectives identifying areas where the cloud can be a valuable and appropriate resource.

Strengths of the cloud will be mapped with business and application needs in order to identify the most significant areas of value. Once these key strategic areas are identified, systems and applications will be assessed for cloud viability.

Each application will be planned for and modeled in order to ensure that all relevant factors are considered before migrating to a cloud-based environment.

The result will be a strategic plan that guides your organisation so that you may leverage the benefits of cloud computing while minimising the downside risks.

Services:

- Cloud Infrastructure (IaaS)
- Cloud Platforms (PaaS)
- Business Applications (SaaS)
- Business Processes (BPaaS)
